Judul : *The Relationship between Knowledge Level and Diarrhea Self-Medication Behavior in the RW 05 Community, Kalibaru Subdistrict, Depok City in 2024*

diarrheal disease) comes from the word diarroia (Greek) which means to flow continuously, diarrhea is a condition of defecation in an abnormal state and more liquid than usual and in an amount of three times or more in a 24-hour period. Self-medication is self-treatment that is usually done to overcome health problems or minor disorders. The purpose of this study was to determine the characteristics, level of knowledge, and behavior of self-medication for diarrhea in the community of RW 05, Kalibaru Village, Depok City. This study used a descriptive survey method, namely through data collection with a questionnaire. The results of the study showed that the most people suffering from diarrhea were men (55.7%) based on age, the most adults were 21-40 years old (62.9%), based on education, the most were high school graduates (51.5%), and based on occupation, the most were people who worked (60.8%), the level of community knowledge was good with a percentage (58.8%), the level of self-medication behavior was good (72.2%). The Chi-square results obtained a p value of 0.00, which means that there is a relationship between the level of community knowledge in RW 05 and self-medication behavior in Kalibaru Village.
