Program Studi : Farmasi
Judul : Pola Penggunaan Obat Anti-Inflamasi Non Steroid (OAINS) pada Pasien Rawat Jalan di Puskesmas Kecamatan Kalideres Jakarta Barat Periode Januari-Maret 2023

OAINS digunakan sebagai obat nyeri. Peresepan OAINS harus tepat dilakukan. Penelitian ini bertujuan mengetahui pola penggunaan OAINS. Penelitian deskriptif dengan pengambilan data retrospektif menggunakan rekam medis. Hasil dan kesimpulan dari 379 sampel didapatkan jumlah pasien terbanyak penerima OAINS berdasarkan jenis kelamin adalah perempuan 226 orang (59.63%), berdasarkan usia yaitu pra lanjut usia 186 orang (49.08%), berdasarkan diagnosis yaitu infeksi 92 pasien (24.27%). OAINS terbanyak adalah parasetamol 256 resep (67.55%). Tepat indikasi 100%, 6 resep (1.58%) tidak tepat dosis, 11 pasien (2.90%) tidak tepat penilaian kondisi pasien, 26 resep (6.86%) tidak tepat waspada efek samping.

Kata Kunci: OAINS, POR, Tepat Dosis

Title : *Pattern of Use of Non-Steroid Anti-Inflammatory Drugs (NSAIDs) in Outpatient Patients at Kalideres District Health Center, West Jakarta, January-March 2023*

NSAIDs are used as painkillers. Prescribing NSAIDs must be done appropriately. This research aims to determine patterns of NSAID use. This research is descriptive with retrospective data collection using medical records. The results and conclusions from 379 samples showed that the highest number of patients receiving NSAIDs based on gender were 226 women (59.63%), based on age, namely pre-elderly 186 people (49.08%), based on the diagnosis of infection 92 cases (24.27%). The most common NSAID was paracetamol with 256 prescriptions (67.55%). Precise indication 100%, 6 prescriptions (1.58%) incorrect dosage, 11 patients (2.90%) incorrect assessment of patient condition, 26 prescriptions (6.86%) inappropriate warning of side effects.
