Title : Relationship of Knowledge and Attitude to Housewives' Behavior Regarding Immunization in Posyandu RT 003 and RT 006 RW 009 Curugsawer Village Pandeglang Banten

Immunization is one of the effort that can provide immunity to children by Introducing vaccines into the body. The immunization program is the best way to protect individuals from attacks of dangerous and deadly diseases, especially for infants and children because immunization is expected to reduce morbidity and mortality, and is ready to reduce disability due to disease. This research was conducted to find out the knowledge and attitudes of housewives regarding immunization in posyandu RT 003 and RT 006 Kampung Curugsawer. This research is an observational study with a descriptive cross sectional research design. The number of respondents was 57. Data were obtained through a questionnaire through a survey of mothers' homes in RT 003 and RT 006. It contained 10 questions on knowledge, 8 questions on respondents' attitudes and 9 questions on respondent behavior regarding immunization at the posyandu. The results of the study were based on the Chi-square test. There was a relationship between knowledge and behavior regarding immunization in posyandu RT 003 and RT 006 Kampung Curugsawer. , because the p-value is smaller than 0.05, namely (0.000) and on attitude there is a significant relationship between attitude and mother's behavior regarding immunization at the posyandu, the p-value is $0.019 < 0.05$ (alpha).
