Judul Skripsi : Kualitas Hidup Pada Pasien Penderita Jantung Koroner Pasca PCI (*Percutaneous Coronary Intervention*) Dengan Kuesioner EQ-5D di RSPAD Gatot Soebroto.

Penelitian ini bertujuan untuk mengetahui karakteristik Pasien penderita jantung Koroner Pasca PCI (*Percutaneous Coronary Intervention*) dan Kualitas hidup pada Pasien Penderita Jantung Koroner Pasca PCI (*Percutaneous Coronary Intervention*) dengan kuesioner EQ-5D di RSPAD Gatot Soebroto. Penelitian ini observasi non- eksperimental dengan jumlah responden 50 pasien Pasien Penderita Jantung Koroner Pasca PCI (*Percutaneous Coronary Intervention*) di RSPAD Gatot Soebroto. Penilaian kualitas hidup menggunakan kuesioner EQ-5D. Analisis data dihitung menggunakan uji Univariat. Hasil penelitian menunjukkan distribusi laki-laki sebanyak 36 pasien (72.0 %) dan distribusi perempuan lebih sedikit 14 pasien (28.0 %). Distribusi usia terbesar pada usia > 60 tahun 27 pasien (54.0 %). Distribusi pendidikan lebih besar pada SMA 31 pasien (62.0%). Hasil Kualitas Hidup Pasien Penderita jantung koroner pasca Pci (*Percutaneous Coronary Intervention*) di RSPAD Gatot Soebroto baik (0.38574). Berdasarkan Nilai VAS (*Virtual Analog Scale*) menunjukkan bahwa pasien dalam keadaan nyeri ringan (29,2).

Kata Kunci : Penyakit Jantung Koroner, *Percutaneous Coronary Intervention*.
Kualitas Hidup.

Title : Quality of Life in Patients with Coronary Heart Post PCI (Percutaneous Coronary Intervention) With the EQ-5D Questionnaire at Gatot Soebroto Army Hospital.

This study aims to determine the characteristics of patients with coronary heart disease after PCI (Percutaneous Coronary Intervention) and the quality of life in patients with coronary heart disease after PCI (Percutaneous Coronary Intervention) with the EQ-5D questionnaire at RSPAD Gatot Soebroto. This research was a non-experimental observation with a total of 50 patients with Coronary Heart Patients after PCI (Percutaneous Coronary Intervention) at RSPAD Gatot Soebroto. Assessment of quality of life using the EQ-5D questionnaire. Data analysis was calculated using the Univariate test. The results showed that the distribution of men was as much as 36 patients (72.0%) and the distribution of women was less than 14 patients (28.0%). Largest age distribution in Russia > 60 years 27 patients (54.0%). The distribution of education was greater in SMA with 31 patients (62.0%). The results of the quality of life of patients with coronary heart disease after Pci (Percutaneous Coronary Intervention) at RSPAD Gatot Soebroto are good (0.38574). Based on the VAS (Virtual Analog Scale) value, it shows that the patient is in mild pain (29.2).
