Title : Outpatient Patient Satisfaction Analysis of Service Quality at the Pharmacy Installation RSAU dr. Esnawan Antariksa

Pharmaceutical services are directly responsible to patients to improve the quality of life of patients. Quality of service can be assessed from the level of patient satisfaction. The purpose of this study is to measure the level of patient satisfaction with pharmaceutical services based on the five dimensions of service quality at the RSAU Pharmacy Installation, Dr. Esnawan Space. The type of research used is quantitative descriptive research by purposive sampling. Analysis is carried out based on servqual method (tangibles, reliability, responsiveness, assurance, and empathy) using a questionnaire with validity and reliability tests which then measures satisfaction levels based on the Likert scale. The results of the average percentage of patient satisfaction with the quality of pharmacy services amounted to 83.44% as a whole the patients were very satisfied with the services provided by the pharmaceutical installation staff of RSAU dr. Esnawan Antariksa.

Keywords: Five Dimensions of Service Quality, Outpatient Pharmacy Installation, Patient Satisfaction Level.
