Judul : Evaluasi Rasionalitas Penggunaan Obat Antituberkulosis Pada Pasien Tuberkulosis Paru Rawat Jalan Di RSUD dr. Chasbullah Abdulmadjid Kota Bekasi Tahun 2017

Tuberkulosis adalah penyakit menular langsung yang disebabkan oleh infeksi kuman (basil) *Mycobacterium tuberculosis* yang sebagian besar dapat menyerang paru. Penelitian ini bertujuan untuk mengetahui gambaran demografi pasien, penggunaan obat antituberkulosis dan mengevaluasi kesesuaian penggunaan obat antituberkulosis pada pasien tuberkulosis paru rawat jalan di RSUD dr. Chasbullah Abdulmadjid Kota Bekasi Tahun 2017. Penelitian ini termasuk jenis penelitian non eksperimental dengan pengambilan data retrospektif, dianalisis menggunakan metode deskriptif dengan teknik pengambilan sampel secara *purposive sampling* dan didapatkan data sebanyak 103 pasien. Hasil evaluasi kesesuaian penggunaan OAT diperoleh kesesuaian indikasi sebanyak 100%, kesesuaian pemilihan obat sebanyak 97,09%, kesesuaian dosis sebanyak 100% dan kesesuaian frekuensi sebanyak 100% dengan standar Pedoman Nasional Penanggulangan Tuberkulosis dari Depkes RI tahun 2014.

Kata Kunci :

Evaluasi rasionalitas OAT, OAT di RSUD dr.Chasbullah Abdulmadjid

ABSTRACT
